Introduction

This specification describes the part of the "Online bills payment" project which is related to the Login, Dashboard and Create transactions

Functional requirements

1. When the user go to http://www.onlinebills.com he will see the login page with Username, Password and Login button

2. A documentation of Create New Registration will be delivered later.

3. For valid credentials the user can use username: testuser and password: TestUser1

4. When a user provides wrong password or username a red colored message: "Wrong password or username!" appears

5. When a user provides blank password or username a red colored message: "A blank password or username is provided!" appears

6. When the user login successfully he is redirected to the Homepage. See the mockup for more details.

7. When the user click on Create transaction a confirmation window with OK and Cancel buttons appears

8. When OK button is clicked a green message: "The transaction is completed" appears

9. When Cancel button is clicked the confirmation window is closed and the user is turned back to the Homepage

10. There is a dropdown list with predefined options of choosing a card already registered from the user

11. When the user clicks Logout a confirmation window appears.

12. When the user clicks OK to confirm logout its session is killed and the user is redirected to the login page.

13. When the user clicks Cancel to reject the logout he is landed back to the last visited page
